

Your Local Distributor:

power generation

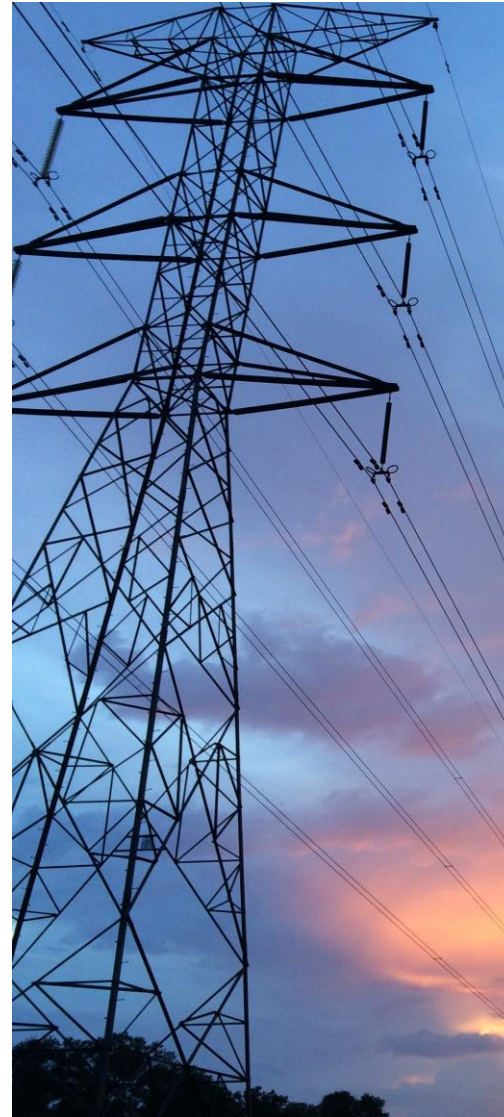

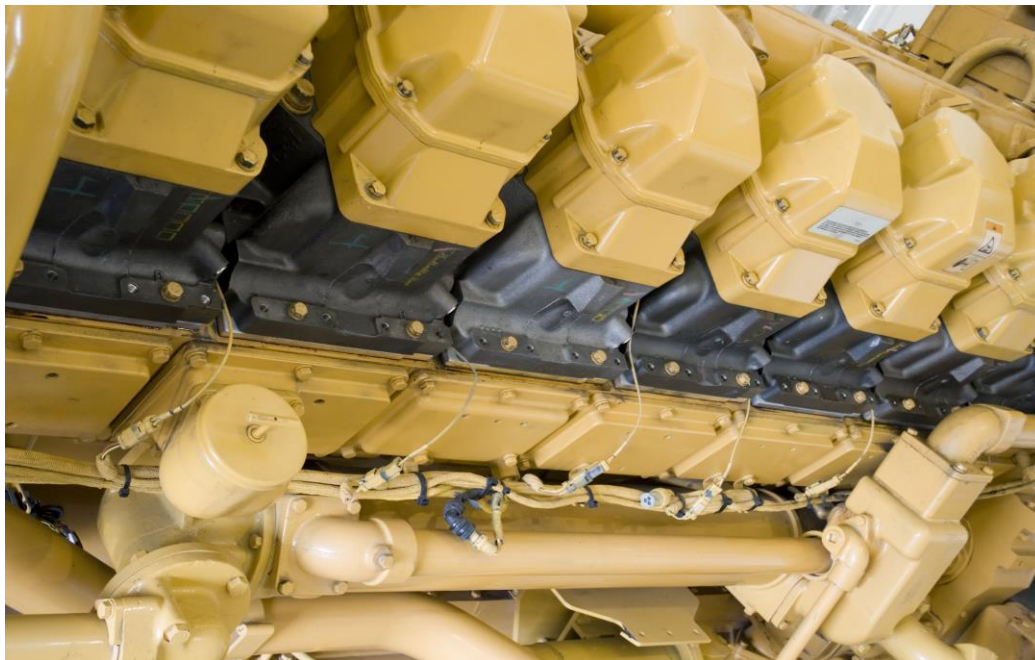

Energen™ is more than just an additive. All additives are soluble into the fuel however few truly become part of the fuel. Energen™ is different in that all of its components have been infused into the fuel that they are treating thus becoming part of the fuel and combusting with the fuel for a more complete burn. This is what we call a "Fuel Conditioner".

Energen™, A Proven Fuel Saver & Anti-pollutant, A Fully Tested Fuel Oil Conditioner, by being part of the fuel allows for it to;

- Greatly reduce fuel consumption by delivering more energy from less fuel
- Stabilises the fuel, vastly improving the fuel oils compatibility
- Dissolves sludge formation in tanks and lines, greatly improving the fuels reliability
- Combustion Improver, via better atomisation and vaporisation resulting in brighter active flames
- Efficiency Improver, greatly reducing soot build-up on boiler heat transfer surfaces and lowers stack temperature
- Cleans the environment by inhibiting particulates, black smoke and polluting stack discharges

CONSERVES FUEL OIL AND CLEANS THE MECHANICAL ENVIRONMENT resulting in less fuel used and a cleaner environment.

Energen™ FuelOil (HFO, IFO & LFO), Heating Oil and No. 2 – 6 Diesel Conditioner, breaks down the hydrocarbon chains of the fuel. This greatly improves the vaporisation and atomisation of the fuel. As a result of this, there is greatly Improved positive combustion with more heat output, and greatly increased Steam Production Ratio of more Steam Produced per Litre of FuelOil / No. 2 – 6 Diesel burned.

P.O. Box 222,
Caulfield South,
VIC 3162

DIRECTIONS: Add 1 Litre of ENERGEN Diesel Conditioner for every: 500 LITRES OF DIESEL FUEL

- directly to the fuel tank or bulk fuel storage tank
- allow up to 24 hours blend time
